A fertilizer is any material of natural or synthetic origin that is applied to soils or to plants to supply one or more plant nutrients essential to the growth of plants. Many farmers across the world are shifting from chemical fertilizers to organic fertilizers. Organic fertilizers are carbon-based compounds that increase the productivity and growth quality of plants. Using organic fertilizers helps ensure food produced from these fertilizers is non-toxic, safe and environment friendly and also ensures farms remain fertile for longer periods. Organic fertilizers play an important role in practicing sustainable organic farming by the farming community.
