## Abstracts

The global Fiber Optic Sensors market was valued at 1312.52 Million USD in 2021 and will grow with a CAGR of 10.92% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fiber optic sensors are fiber-based devices for sensing some quantity, typically temperature or mechanical strain, but sometimes also displacements, vibrations, pressure, acceleration, rotations or concentrations of chemical species. The general principle of such devices is that light from a laser (often a single-frequency fiber laser) or from a superluminescent source is sent through an optical fiber, experiences subtle changes of its parameters either in the fiber or in one or several fiber Bragg gratings, and then reaches a detector arrangement which measures these changes. Compared with other types of sensors, fiber optic sensors exhibit a number of advantages: ? They consist of electrically insulating materials (no electric cables are required), which makes possible their use e.g. in high-voltage environments. ? They can be safely used in explosive environments, because there is no risk of electrical sparks, even in the case of defects. ? They are immune to electromagnetic interference (EMI), even to nearby lightning strikes, and do not themselves electrically disturb other devices. ? Their materials can be chemically passive, i.e., do not contaminate their surroundings and are not subject to corrosion. ? They have a very wide operating temperature range (much wider than is possible for many electronic devices). ? They have multiplexing

capabilities: multiple sensors in a single fiber line can be interrogated with a single optical source Micron Optics, Honeywell, FISO Technologies, Omron and FBGS TECHNOLOGIES GMBH are the top 5 manufacturers of global Fiber Optic Sensors, with about 39% market shares.
