The global Fire Protection Materials market was valued at 6358.41 Million USD in 2021 and will grow with a CAGR of 7.07% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fire protection materials are a class of materials which find use in applications that help ensure safety of buildings from hazards associated with fire. Fire detection, coupled with fire suppression through manual or automatic means, aid in curbing fire and damages resulting therefrom. Partitioning the overall building or construction structure with fire resistance rated floors and walls also assists in ensuring protection from fire. This could also involve the use of passive fire protection materials, such as fire resistant boards, sealants and fire resistant materials, such as mineral wool and fire proof coatings. Active fire protection materials, such as fire extinguishing foams, chemicals, water and sprays also constitute an important part of fire protection materials market. The commercial construction application segment is expected to witness the highest growth between 2017 and 2025.
