A fire pump is a part of a fire sprinkler system's water supply and can be powered by electric, diesel or steam. The pump intake is either connected to the public underground water supply piping, or a static water source (e.g., tank, reservoir, lake). The pump provides water flow at a higher pressure to the sprinkler system risers and hose standpipes. There are generally three types of drive power used for fire pump, which include diesel engine, petrol engine and electric motors. Petrol motors are commonly used for portable fire pump and light duty firefighting. The main manufacturers of petrol motors for fire pumps include Honda, Briggs & Stratton and other regional brands. Diesel engines are suitable for firefighting application in factory, building, pier and other high capacity fire pumps. Worldwide, the main manufacturers of fire pumps are Pentair, Grundfos and Flowserve. The three enterprises are famous in the fire pump industry because of wonderful product performance and related services. Electric motors are the most widely used drive power for fire pumps, which is efficient and convenient. In 2016, electric motor power fire pumps occupied about 50% of the total fire pumps market.
