Fire resistant fabrics are those textiles that resist high temperature and fire. These fabrics are known to be naturally resistant in comparison to other chemical treatments or fireproof fibers that are manufactured artificially. Fire resistant fabrics are organic or carbon-containing materials that reduce a fire hazard. These fabrics do not glow or burn on removal of the ignition source; however, certain changes are observed in their physical and chemical characteristics. Apparel is expected to be the largest application in the global fire resistant fabrics market from 2017 to 2025.
