A first aid kit is a collection of supplies and equipment for use in giving first aid, and can be put together for the purpose by an individual or organization or purchased complete. There is a wide variation in the contents of first aid kits based on the knowledge and experience of those putting it together, the differing first aid requirements of the area where it may be used and variations in legislation or regulation in a given area. As a useful and convenient tool needed in emergency, first aid kits are widely produced and sold worldwide, especially in developed countries such as United States, Japan, Germany and etc. Currently, Europe is the largest consumption market of first aid kits worldwide, driven by the wide awareness of the necessity of having a first aid kit at home or when going outside. Consumption market of first aid kits in United States and Japan are also quite remarkable. However, market in these regions is already mature, and doesn't grow that fast any longer. Consumption market in developing countries and regions are regarded as emerging market of first aid kits and the main market growth driven factor in the following decade. In summary, there is still market space of first aid kits, especially in emerging market; and the market is still promising to some extent. But it is suggested that new enterprises should not enter the market without technology or
