A flame detector is a sensor designed to detect and respond to the presence of a flame or fire. Responses to a detected flame depend on the installation, but can include sounding an alarm, deactivating a fuel line (such as a propane or a natural gas line), and activating a fire suppression system. For industry structure analysis, the Flame Detectors industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 20.50% of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Flame Detectors industry.
