The global Flare Gas Recovery Systems market was valued at 2253.37 Million USD in 2021 and will grow with a CAGR of 7.55% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Flare gas recovery systems are used in petroleum refineries to reduce flare emissions and offset the plant's purchased fuel gas. The total cost of a project (equipment and installation) is typically recovered in two to three years (sometimes less) depending on system throughput and the value of recovered gas. Increasing power generation applications have been a primary factor fueling the demand for flare gas recovery systems on a global level. A majority of producers re-inject flare gas in natural gas production wells in order to maintain the optimum pressure inside the wells.
