Abstracts

The global Flavors market was valued at 1085.02 Million USD in 2021 and will grow with a CAGR of .9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Flavor is the sensory impression of a food or other substance, and is determined mainly by the chemical senses of taste and smell. The 'trigeminal senses', which detect chemical irritants in the mouth and throat as well as temperature and texture, are also very important to the overall Gestalt of flavor perception. The flavor of the food, as such, can be altered with natural or artificial flavorants, which affect these senses. Flavorant is defined as a substance that gives another substance flavor, altering the characteristics of the solute, causing it to become sweet, sour, tangy, etc. Although the terms 'flavoring' or 'flavorant' in common language denote the combined chemical sensations of taste and smell, the same terms are usually used in the fragrance and flavors industry to refer to edible chemicals and extracts that alter the flavor of food and food products through the sense of smell. Due to the high cost or unavailability of natural flavor extracts, most commercial flavorants are nature-identical, which means that they are the chemical equivalent of natural flavors but chemically synthesized rather than being extracted from the source materials. Identification of nature-identical flavorants are done using technology such as headspace techniques. As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the

next few years there will be many uncertainties. Coupled with flavors industry in short supply on the market in the past few years, more and more companies have entered into flavors industry, the current demand for flavors product is relatively low. Ordinary Flavors products on the market do not sell well; low-end product has excess capacity, and high-end product is in short supply.
