Abstracts

The global Flexible Batteries market was valued at 305.98 Million USD in 2021 and will grow with a CAGR of 16.91% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A flexible battery comprises a cell stack composed of multiple unit cells and an external casing for sealing the cell stack. Each of the multiple unit cells is composed of a positive electrode, a negative electrode, and an electrolyte layer positioned between the negative electrode and the positive electrode. Flexible batteries are stretchable, bendable, and lightweight in nature and easy to use in intricate products with limited internal space. These batteries are widely used in wearable electronic devices such as smart glasses, smart watches, fitness bands, smart video/photo devices, and smart textiles, due to their characteristics. As the flexibility feature enables the battery to be folded, rolled, cut, and adapted to complement any shape of the product, the demand for flexible batteries is expected to increase in electronic applications in the near future. IoT devices are likely to require battery attributes such as re-chargeability with high-storage capacity and wireless connection to external power supplies in the near future.
