The global Flexible Foams market was valued at 3384.39 Million USD in 2021 and will grow with a CAGR of 4.65% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Flexible foams are primarily of three types: polyurethane, polyethylene, and polypropylene. Various other types of flexible foams are also used such as polyvinyl chloride foams, polystyrene foams, and polyolefin foams. Flexible foams are increasingly used as insulators because they are cost effective and restrict the transfer of heat. The polyurethane flexible foam segment accounted for the major shares and dominated this market. Polyurethane flexible foam is light, durable, malleable, comfortable, resilient, and can handle strength. As a result, they are used in various cushioning products. Factors such as the growing population and the high demand for automobiles will contribute to the growth of this market segment in the coming years.
