The global Flight Simulator market was valued at 373.84 Million USD in 2021 and will grow with a CAGR of 3.17% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A flight simulator is a device that artificially re-creates aircraft flight and the environment in which it flies, for pilot training, design, or other purposes. It includes replicating the equations that govern how aircraft fly, how they react to applications of flight controls, the effects of other aircraft systems, and how the aircraft reacts to external factors such as air density, turbulence, wind shear, cloud, precipitation, etc. Flight simulators are now extensively used in the aviation industry for design and development and the training of air crew for both civil and military aircraft. In the coming years there is forecasted to be stable demand scale for flight simulator worldwide, especially in emerging market such as China and India, which is expected to drive the industry development of flight simulator. It is forecasted that the global market of flight simulator will reach as high as 4099 Million USD by the end of 2022. Globally, the flight simulator industry market is quite concentrated as the manufacturing technology of flight simulator is super complex and is related to lots of hardware and software technology. Several enterprises, like CAE, L3 Technologies and FlightSafety International are well-known for the technology status of their flight simulator and related services. At the same time, North America, occupied 80% revenue market share in 2016, is remarkable in the global flight simulator
