## Abstracts

The global Flip Chip Technology market was valued at 2117.96 Million USD in 2021 and will grow with a CAGR of 6.02% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In the development of packaging of electronics, the main aim is to lower cost, increase the packaging density, and improve the performance by maintaining or improving the reliability of the circuits. The concept of the flip-chip process where the semiconductor chip is assembled face down onto the circuit board is ideal for size considerations because there is no extra area needed for contacting on the sides of the component. The performance in high-frequency applications is superior to other interconnection methods because the length of the connection path is minimized. Flip chip bumping is a vital step in the process. The bump provides the necessary electrical connection between the die and the substrate, provides thermal conduction through the two materials, acts as a spacer to prevent electrical shorts and provides mechanical support. The APAC held a large share of the overall flip chip technology market in 2017.
