Float glass is a sheet of glass made by floating molten glass on a bed of molten metal, typically tin, although lead and various low melting point alloys were used in the past. This method gives the sheet uniform thickness and very flat surfaces. Most float glass is soda-lime glass, but relatively minor quantities of specialty borosilicate and flat panel display glass are also produced using the float glass process. The industry's main producers are NSG Group, Xinyi Glass and Kibing-Glass, which together account for 22.18% of revenues in 2019. By region, the Asia-Pacific region has the highest share of income, at more than 55 percent.
