The global Floating Power Plant market was valued at 923.85 Million USD in 2021 and will grow with a CAGR of 7.72% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Floating power plant plays a crucial role in electricity generation at remote areas where power generation is restricted due to scarcity of land mass. Shortage of electricity or the lack of access is one of the major development hurdles faced by many regions in developing countries. Moreover, in many countries, certain regions are not connected with their national distribution grid and off grid power is their only source of energy. In addition to that, growing concern about climate change and global warming are increasingly forcing nations to switch to renewable energy sources to meet their respective climate change targets. Asia-Pacific is anticipated to dominate the global floating power plant market owing to the increasing renewable floating power plants in countries such as Japan, China.
