Floor grinding machine, or floor grinder, is a purpose-built machine that are used for grinding and polishing marble, granite, concrete and any other kind of floor. Machines that grind concrete floors are usually made to handle much more stress and will have more power to drive the unit as concrete has a much higher sliding friction than marble or granite which is also worked wet, therefore with less friction. In fact some types of marble will spark when it is ground dry, causing deep damage to the marble surface. For industry structure analysis, the Floor Grinding Machine industry is not concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 30 % of the revenue market. Regionally, North America is the biggest production value area, also the leader in the whole Floor Grinding Machine industry. North America and China occupied largest market share with 30.40% and 29.30% respectively in 2017. It is followed by Europe, which account for around 24.42% of the global total industry. Other countries have a smaller amount of production. Geographically, North America was the largest consumption market in the world, which took about 28.02% of the global consumption volume in 2017.
