Floriculture is a branch of horticulture addressing flower and ornamental plant cultivation and propagation of flowering plants for gardens, greenhouses, nurseries and landscapes comprising the floral industry. Floriculture crops include bedding plants, houseplants, flowering gardens and potted plants, cut cultivated greens, and cut flowers. Floriculture involves propagating, growing and marketing cut flowers, flower seeds and seedlings, bulb growing, nursery operation, chemical protection of plants, post-harvest storage and handling and use of preservatives. It is an international, multi-billion dollar industry. As for consumption, Europe is also the largest consumer of floriculture, with 50.94% consumption share in 2016. North America and China are also key consumers. In addition, on the consumption side of the business, the rise of online floriculture sales is definitely one of these trends. In export market, the Netherlands is still a major junction in global cut flower trade, but the four cut flower exporters close to the equator?Colombia, Kenya, Ecuador and Ethiopia?are gathering speed. The Netherlands plays a key role in the global cut flowers trading as it has more than 40% export share. When refers to the import side, Europe, USA and Japan are the major importers.
