The global Flow Cytometers market was valued at 2967.27 Million USD in 2021 and will grow with a CAGR of 9.27% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Flow cytometers (FC or FCM) are automated instruments that quantitate properties of single cells, one cell at a time. They can measure cell size, cell granularity, the amounts of cell components such as total DNA, newly synthesized DNA, gene expression as the amount messenger RNA for a particular gene, amounts of specific surface receptors, amounts of intracellular proteins, or transient signaling events in living cells. Quantities are usually relative, but can be numbers of molecules per cell when absolute values are needed. Typically, up to three to six properties or components are quantitated in a single sample, cell by cell, for about 10,000 cells, in less than one minute (not counting time to prepare the sample, which might be an hour or more).Due to the wide application, demand of flow cytometers increased fast in recent years. Flow cytometers market kept growing fast and will keep the developing tend. At present, USA is the main market of flow cytometers. Viewed from the supply side, there are a few manufacturers in the flow cytometers industry, while from the demand side, the current demand for flow cytometers is growing.
