The global Fluidized Bed Concentrator (FBC) market was valued at 15.13 Million USD in 2021 and will grow with a CAGR of 5.15% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A fluidized bed concentrator (FBC) is an industrial process for the treatment of exhaust air. The system uses a bed of activated carbon beads to adsorb volatile organic compounds (VOCs) from the exhaust gas. Evolving from the previous fixed-bed and carbon rotor concentrators, the FBC system forces the VOC-laden air through several perforated steel trays, increasing the velocity of the air and allowing the sub-millimeter carbon beads to fluidize, or behave as if suspended in a liquid. This increases the surface area of the carbon-gas interaction, making it more effective at capturing VOCs. Fluidized Bed Concentrator (FBC) manufacturers range from large multinational corporations to small privately owned companies in this industry. The leading players are TKS Industrial, Kurekan, CECO Environmental, Environmental C&C and Topcent Enviro, accounting for 90.74 percent revenue market share in 2017. The market scale will keep increasing in the next few years. Although sales of Fluidized Bed Concentrator (FBC) brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Fluidized Bed Concentrator (FBC) field.
