Abstracts

The global Fluorine Aromatic PI Film market was valued at 53.32 Million USD in 2021 and will grow with a CAGR of 23.67% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fluorinated aromatic PI film products with good transparency in the visible region. Fluorinated aromatic PI film products have been widely used in flexible display substrates, Solar Cell, Flexible Printed Circuit Boards (PCBs) and aerospace industries, due to their outstanding properties, such as thermal stability, high mechanical performance, good chemical resistance and excellent electrical properties. In the past several years, United States, Korea and Japan are main producers of fluorine aromatic PI film products, and top players are distributed in these three countries, like MGC and I.S.T Corporation from Japan, NeXolve and DuPont from US, while SKC Kolon PI from Korea. There are several small players in China, like Fuxin Hongji Photoelectric Materials, Hipolyking and Huajing etc. They produce and sell low-end polyimide film products, but in fluorine aromatic PI film products they are at the research stage at the moment. It predicts they will achieve mass production around 3-5 years. Currently, the market is dominated by several players such as MGC, SKC Kolon PI, I.S.T Corporation, NeXolve and DuPont. But this situation will change after five years when more Chinese players will enter this market and bring more intense competition. But it is difficult to change the market, especially in the high-end market.
