Food acidulants are food additives, used to preserve the flavor, maintain the taste as well as other olfactory properties. Food acidulants serve an essential role in the manufacturing of packaged and convenience food. Also, it helps in reducing spoilage from air, bacteria, fungi, and yeast which in-turn increases the product shelf-life. Commonly used food acidulants in the foods & beverages industry are acetic acid, citric acid, lactic acid, phosphoric acid, and malic acid. Changing consumers` preference towards convenience, packaged, and frozen foods have intensified the usage of food acidulants in the food & beverage industry. It is experiencing high demand due to its added nutritional attributes. Growing health concerns among the global population together with the increasing awareness about the benefits of consuming food preservatives are most likely to drive the growth of the food acidulants market. Also, value-added benefits associated with the use of food acidulants in the food products are also supporting the sale of food acidulants globally.
