Food animal eubiotics is a kind of animal feed additive that used for maintaining optimal balance of microflora (eubiosis) in the gastrointestinal tract. Food animal eubiotics help in proper nutrient absorption required for normal working of the body. It is essential for producing well-nourished animals. Rise in demand for animal protein products, ban on use of antibiotics and increasing living standards are the main driving forces for the growth of food animal eubiotics market. We forecast Asia Pacific will be the largest consumer of food animal eubiotics and is expected to retain the higher growth rate during the next five years due to strong growth in food animal eubiotics. China and India will witness a major chunk of the production and consumption of food animal eubiotics in the Asia Pacific region.
