A food dehydrator refers to a device that removes moisture from food to aid in its preservation. A food dehydrator uses a heat source and air flow to reduce the water content of foods. The water content of food is usually very high, typically 80% to 95% for various fruits and vegetables and 50% to 75% for various meats. Removing moisture from food restrains various bacteria from growing and spoiling food. Further, removing moisture from food dramatically reduces the weight of the food. Thus, food dehydrators are used to preserve and extend the shelf life of various foods. With the improvement of national economy, the food dehydrators industry has rapidly developed and it now plays an important part in people's life. Production market and manufacturers are expanding, food dehydrators are seizing the market with increasing brand and marketing effect.
