Abstracts

The global Food Inclusions market was valued at 1041.18 Million USD in 2021 and will grow with a CAGR of 6.07% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Food Inclusions are added to the food products to enhance visual appearance, texture and add flavor. Some of the widely used food inclusions are chips and flakes, wafer, jellies, dried fruits and nuts. The European market is estimated to account for the largest share in 2018. This can primarily be attributed to factors such as the region's large-scale production and domestic consumption of food inclusions, which is fueled by food & beverage manufacturers' urge for product innovation with the use of novel ingredients to cater to consumer indulgence. The market in Asia Pacific is projected to grow at the highest CAGR, owing to the rise in consumption of inclusions and their innovative usage in line with the flavor profile and other consumer requirements, along with the Westernization of diets. The resultant increase in the final price of end products acts as a restraint for the growth of the food inclusions market.
