The global Fork Sensors market was valued at 149.3 Million USD in 2021 and will grow with a CAGR of 4.6% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fork sensors (slot sensors) are U shaped through-beam object detecting sensors that have the transmitter and receiver built into the opposing "fork" arms of the sensor housing. Fork sensors are photoelectric thru beam sensors in a aluminium fork housing. These type of sensors are, because of the 5 kHz switching frequency, ideal for fast detection- and counting applications where accuracy and liability are of great importance.
