Form-in-Place gaskets (FIPG) are designed to replace conventional gaskets & O-rings, and involve dispensing conductive or non-conductive elastomers directly onto metal or plastic substrates. Conductive materials are typically applied to electronic components or devices for EMI & RFI shielding, and non-conductive materials are used for environmental sealing or bonding. Formed-in-place gaskets (FIPG) have been in use for a few decades in the automotive industry. Many applications are in the power train system - engine & driveline. This would include engine block to oil pan, engine cover to engine block, intake manifolds, thermostat housings, pump covers, power steering housings, etc. Additional applications are in components, particularly electrical components and lamps, such as headlamps, side markers, etc. According to types, the most proportion of the Form in Place (FIP) Gaskets is Conductive Form-In-Place Gaskets, taking about 62% sales share of global market in 2020. The most proportion of Form in Place (FIP) Gaskets is used for Electronics and the proportion is about 57% in 2020.
