The global Foundry Coke market was valued at 2157.55 Million USD in 2021 and will grow with a CAGR of 1.53% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Foundry Coke is mainly used in blast furnace and used for copper, lead, zinc, titanium, antimony, mercury and other non-ferrous metal smelting blast furnace, reductant, play a thermite and stock column skeleton function. It is a source of heat and also helps maintain the required carbon content of the metal product. Foundry coke production requires lower temperatures and longer times than blast furnace coke. Foundry Coke has large block, low reactivity, low porosity, big shatter strength, low ash and sulfur content.As indispensable raw material for the operation of foundry industry, the demand and development of foundry coke is directly affected by the market situation of foundry industry. Affected by the overcapacity and weak downstream demand, the market of foundry industry is not that stable in United States. In 2012, the sales volume of foundry coke in United States was estimated at 1.39 million MT. But the volume was reduced to about 1.34 million MT in 2015, and in 2016 the volume was about 1.38 million MT.
