The global Fracking Chemicals and Fluids market was valued at 2843.8 Million USD in 2021 and will grow with a CAGR of 7.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fracking fluids are a complex mixture of chemicals, water, and sand. The composition of fracking fluids is unique to each company; they alter the composition of fracking fluids depending on the presence of groundwater or surface water. The water-based fluid segment accounted for the major market share in the global fracking fluid and chemicals market and is expected to lead the hydraulic fracturing market during the next few years. Water-based fluids are widely used for fracturing treatment and to recover shale gas and oil. Deep reservoirs require high-density fluids for the efficient fracking process thus increasing the demand for water-based fluids.
