A filter press is a solid-liquid separation device that uses the principle of pressure feeding. It has a series of filter plates arranged together and recessed plates or frames that are arranged in an alternative manner. The filter medium is arranged in between the filter press plates. A feeding pump is used for forcing liquid through a medium, thus leaving solids trapped inside. When compared with other pressure filters, the filter press holds a higher volume of solids per square foot of the filtering surface area. The closer which is required is hydraulically or manually operated. It contains a controller, which presses the filter plates together, thus creating a sealed unit. The hydraulic system, which is best suited for dewatering applications, is typically dependent on the size of the filter press required. Globally, the Frame Filter Press industry market is concentrated Asia-Pacific, Europe and North America. And some enterprises, like Jingjin, ANDRITZ, Aqseptence Group, Eaton, FLSmidth, etc. are well-known for the wonderful performance of their Frame Filter Press and related services.
