Abstracts

The global Freeze Drying Equipment market was valued at 1368.44 Million USD in 2021 and will grow with a CAGR of 7.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Freeze drying, also known as lyophilisation or cryodesiccation, is a low temperature dehydration process which involves freezing the product, lowering pressure, then removing the ice by sublimation. This market research and analysis estimates that the tray style freeze dryer segment dominated the market. These dryers facilitate both primary and secondary freeze drying and are used to produce the driest products for long-term storage. They can dry products in large quantities, in vials, or other containers and play a significant role in applications such as the long-term storage of vaccines and labile drugs. Additionally, the rising demand for frozen and packaged food around the world will also augment the demand for tray style freeze dry machines during the forecast period.
