Textile chemicals are widely used in the processing of fabrics. Some of the main processes include dyeing, bleaching, printing, conditioning, and finishing. Functional textile finishing agents are used to enhance properties of fabrics and impart special functions to the fabrics. For instance, antimicrobial finishes provide bacterial and fungal resistance to fabrics and kill odor-causing bacteria. The textile industry extensively uses different types of release finishing agents and functional repellents such as dirt repellent finishing agents, mosquito repellents, and oil repellents. Topical finishing agents such as water and oil repellents are used on textile fabrics to provide protection against water, oil, greasy materials, and soil. The functional textile finishing agents market is experiencing growth in the repellent and release segment due the growing demand for textile finishing agents such as polysiloxanes and fluorochemicals that are used to improve the softness, crease resistance, and water repellency of the textile material.
