Gallium nitride (GaN) is a binary III/V direct bandgap semiconductor commonly used in light-emitting diodes since the 1990s. The compound is a very hard material that has a Wurtzite crystal structure. The global gallium nitride semiconductor device market for opto-semiconductor device type held the largest market share. This is attributed to its wide application in consumer and enterprise, industrial, and automotive industry. Gallium nitride light-emitting diodes (LEDs) are widely used in laptop and notebook display, mobile display, projectors, televisions and monitor, signs and large displays, etc. Gallium nitride LEDs are also used for the interior and exterior lighting in the automotive industry such as headlights and signal lights, car interior lighting, fog lights, stop lights, and dome lights, etc.
