Abstracts

The global Garden Pesticides market was valued at 739 Million USD in 2021 and will grow with a CAGR of 1.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Garden Pesticides are substances meant for attracting, seducing, and then destroying any pest in the garden, which in general protect plants from damaging influences such as weeds, fungi, or insects. Garden pesticides include herbicides (which kill plants), insecticides (which kill insects), fungicides (which kill fungi) and other pesticides. Pesticides constitute the largest category within the market for crop protection chemicals, with biopesticides accounting for a comparatively minute share. However, growing environmental concerns regarding the use of synthetic pesticides that are primarily produced using petrochemical or inorganic raw materials have resulted in increasing demand for eco-friendly biopesticides. Biopesticides, on the other hand, are manufactured with renewable resources and are free of synthetic active ingredients. Being organic, free of chemical residues and eco-friendly products, biopesticides have been witnessing faster growth in demand compared to their synthetic counterparts.
