The global Gas Chromatography Systems market was valued at 2340.93 Million USD in 2021 and will grow with a CAGR of 3.51% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Gas Chromatography Systems is used for gas chromatography analysis. Chromatography is a technique for separating chemical substances that relies on differences in partitioning behaviour between a flowing mobile phase and a stationary phase to separate the components in a mixture. Gas chromatography is also used to monitor industrial processes automatically: gas streams are analyzed periodically and manual or automatic responses are made to counteract undesirable variations. Two types of gas chromatography are encountered: gas-solid chromatography (GSC) and gas-liquid chromatography (GLC). Gas-solid chromatography is based upon a solid stationary phase on which retention of analytes is the consequence of physical adsorption. Gas-liquid chromatography is useful for separating ions or molecules that are dissolved in a solvent. North America held over 38.0% share of the gas chromatography market in 2017, owing to rising number of conferences and symposiums for chromatography technologies coupled with increasing venture capital funding in the U.S. Furthermore, growing pharmaceutical & biotechnology industries, technological advancements such as automation, miniaturization, and computerization of devices in the U.S. is anticipated to propel the

market's growth in this region.
