The global Gas Turbine Generators market was valued at 3041.04 Million USD in 2021 and will grow with a CAGR of 6.41% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In this report, the gas turbine generator discussed mainly stands for gas turbine generator set, which includes three parts: gas turbine, generator and control systems. And among the three key parts, gas turbine is the most important one. Company who can produce gas turbine will become the leading manufacturer of gas turbine generator in the industry. Gas turbine generator is a device used to generate power. The most important part, gas turbine, is a type of internal combustion (IC) engine in which burning of an air-fuel mixture produces hot gases that spin a turbine to produce power. The statistical data is based on gas turbine generator set. The rated power of the gas turbine is above 1MW. As one of the most important equipment for electricity generation, gas turbine generator plays a valuable role in power industry. The larger and larger downstream demand drives gas turbine generator industry developing.
