The global Gasoline Direct Injection (GDI) System market was valued at 681.02 Million USD in 2021 and will grow with a CAGR of 9.34% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Gasoline direct injection (GDI), also known as petrol direct injection, direct petrol injection, spark-ignited direct injection (SIDI) and fuel-stratified injection (FSI), is a variant of fuel injection employed in modern two-stroke and four-stroke gasoline engines. The gasoline is highly pressurized, and injected via a common rail fuel line directly into the combustion chamber of each cylinder, as opposed to conventional multipoint fuel injection that injects fuel into the intake tract or cylinder port. Directly injecting fuel into the combustion chamber requires high-pressure injection, whereas low pressure is used injecting into the intake tract or cylinder port. The development of gasoline direct Injection (GDI) system is largely related to the automotive industry and other industries. The industry is expected to be quickly growing in the next several years. Due to the stricter emission policies, High Press Common Rail Injection System is the more and more popular due to the sufficient burning. The consumption market share of Passenger Vehicle is about 64.78% in 2016 and the figure is expected to be higher in the next several years.
