The global Gasoline Particulate Filters (GPF) market was valued at 770.98 Million USD in 2021 and will grow with a CAGR of 24.22% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Gasoline particulate filters (GPF) are used to remove particulate matter from the exhaust gas from a gasoline direct injection (GDI) engine. A GDI engine has a higher emission of particulate matter than a port fuel injection gasoline engine. GPF controls the particulate emission by trapping the particulate matter, ultimately making the cars we drive cleaner to the environment. The industry's leading producers are Corning, NGK Insulators and Faurecia, with revenues of 27.35%, 16.01% and 13.30% in 2019.
