## Abstracts

The global Gastrointestinal Stents market was valued at 296.46 Million USD in 2021 and will grow with a CAGR of 4.33% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Gastrointestinal stents consist of stents that include trans-hepatic, esophageal, biliary stents, pancreatic and duodenal stents. The stents are used during colorectal cancer, inflammatory bowel disease, GI bleeding, and other diseases. Based on material, the self-expanding metal stents segment accounted for the largest share of the global gastrointestinal stent market in 2017. The large share of this segment can be attributed to their ease of insertion, a lower possibility of dislodgment or migration, its longer patency because of the large luminal diameters, high longevity, and large use of it in interventional endoscopy for various malignant obstructions.
