Gear hobbing machine is a type of machine tool for cutting gear teeth in gear blanks or for cutting worm, spur, or helical gears. Gear hobbing machine is also usually known as hobber. Globally, the gear hobbing machine industry market is not that concentrated as the manufacturing technology of gear hobbing machine is relatively matures than some high-tech equipment. But some enterprises, like Gleason, Liebherr, CHMTI, Mitsubishi Heavy Industries and EMAG are well-known for the wonderful performance of their hobbing machine and related services. At the same time, Europe and USA are remarkable in the global gear hobbing machine industry because of their technology status of gear hobbing machine. The consumption volume of gear hobbing machine is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of gear hobbing machine industry may not keep that fast. But it is surely forecasted that the market of gear hobbing machine is still promising. The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowing cost of raw materials. Although the market competition of gear hobbing machine is fierce

globally, there are many enterprises can obtain considerable profit form the manufacturing and marketing of gear hobbing machine and that is the reason that we believe there will also be enterprises enter this market. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.
