## Abstracts

The global Generation, Transmission, and Distribution market was valued at 3516.51 Million USD in 2021 and will grow with a CAGR of 2.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The generation, transmission, and distribution industry includes establishments involved in generating, transmitting, and distributing electric power. Companies in this industry operate generation facilities that produce electricity, transmission systems that convey electricity from generation facility to the distribution system, and distribution systems that convey electric power received from the generation facility or the transmission system to the final consumer. Utility business models are continuously evolving from traditional electricity generation models to new business models such as distributed generation models to cut costs and improve transmission and distribution efficiencies. Distributed generation refers to localized power generation using solar panels and other low-cost technologies to produce electricity close to the point of consumption. Consumers are switching to more cost-effective and controlled distributed generation networks, therefore electric power generation companies should now focus on distributed generation rather than a centralized electricity generation model. Also, many companies are using new revenue models and incentives instead of traditional cost-of-service models.
