The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In an electric power system, Generator Control Unit is a system for adjusting the power output of multiple generators at different power plants, in response to changes in the load. Since a power grid requires that generation and load closely balance moment by moment, frequent adjustments to the output of generators are necessary. The balance can be judged by measuring the system frequency; if it is increasing, more power is being generated than used, which causes all the machines in the system to accelerate. If the system frequency is decreasing, more load is on the system than the instantaneous generation can provide, which causes all generators to slow down. Currently, The industry is highly concentrated, technical barriers and financial barriers are relatively high. The companies in the world that produce Generator Control Unit mainly concentrate in North America and Europe, Raw materials are also concentrated in these regions. In particular, as the market leader in Generator Control Unit, GE take the global market share of more than 17.38%, other key manufacturers include Comap, DSE, Kohler, Emerson, Avionic Instruments etc. The production of Generator Control Unit increased from 1585.49 K Sets in 2011 to 2355.90 K Sets in 2016, with an average growth rate of 8.24%. Global Generator Control Unit capacity

utilization rate remained at around 84% in 2016.
