Gifford-Mcmahon Cryocoolers also known as GM Cryocoolers is a type of Cryocoolers. Cooling cycles in these devices typically begin with gas being compressed in a compressor. The expander, commonly referred to as the coldhead or cold finger, is where the Gifford-McMahon refrigeration cycle takes pace. It is connected to a compressor by two gas lines and an electrical power cable. As the compressed gas passes through, it absorbs heat and cooling down. Gifford-Mcmahon Cryocoolers have found widespread application in many low-temperature systems; e.g., in MRI and cryopumps. The report provides a basic overview of the Gifford-Mcmahon Cryocoolers industry including definitions, classifications, applications and industry chain structure. And development policies and plans are discussed as well as manufacturing processes and cost structures. Then, the report focuses on global major leading industry players with information such as company profiles, product picture and specifications, production, market share and contact information. What's more, the Gifford-Mcmahon Cryocoolers industry development trends and marketing channels are analyzed.
