A GIS substation is a high voltage substation in which the major structures are contained in a sealed environment with sulfur hexafluoride gas as the insulating medium. Gas insulated switchgears (GISs) are installed as substation equipment and receiving equipment for safe and stable supply of electricity. Circuit breakers, disconnectors, earthing devices, etc. are enclosed and stored in metal containers using a high-insulation-performance gas. Thus, the equipment is very compact, reliable, and safe. A GIS Substation uses a superior dielectric gas, SF₆, at moderate pressure for phase-to-phase and phase-to-ground insulation. The high voltage conductors, circuit breaker interrupters, switches, current transformers, and voltage transformers are in SF₆ gas inside grounded metal enclosures.
