Insulators are used in electrical equipment to support and separate electrical conductors without allowing current through themselves. An insulating material used in bulk to wrap electrical cables or other equipment is called insulation. The term insulator is also used more specifically to refer to insulating supports used to attach electric power distribution or transmission lines to utility poles and transmission towers. They support the weight of the suspended wires without allowing the current to flow through the tower to ground. Glass Insulators are for use on transmission line and shall be of the standard profile cap and pin type.China has the largest global export quantity and manufacturers in Glass Insulators market, while the North America is the second sales volume market for Glass Insulators in 2019. In the industry, Seves Group profits most in 2019 and recent years, while MacLean Power Systems and Nanjing Electric (BPG) ranked 2 and 3. The market share of them is 20.61%, 17.16% and 14.49% in 2019. The gap of market share is keep on enlarged due to different strategy.
