The global Glassy Carbon market was valued at 7.79 Million USD in 2021 and will grow with a CAGR of 2.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Glassy carbon, also called vitreous carbon, is a non-graphitized carbon which combines glassy and ceramic properties with those of graphite. It takes its name from its shiny, concoidal fracture surface, i.e. it looks like glass. The most important properties are high temperature resistance, extreme resistance to chemical attack, and impermeability to gases and liquids. Glassy carbon is widely used as an electrode material in electrochemistry, as well as for high temperature crucibles. Limited by high technical barriers, there are only six major suppliers all over the world, such as HTW Hochttemperatur-Werkstoffe, Tokai Carbon, Mersen, NEYCO, SPI Supplies and Alfa etc. HTW Hochttemperatur-Werkstoffe, a company based in Germany, is the market leader in this industry with sales share of 61.19% in 2017. Tokai Carbon, which sold 268.4 Kg glassy carbon in 2017, is the second largest supplier in the world. Glassy carbon had many shapes according to different application. During all shapes, glassy carbon crucible is the largest type, which took a share of 68.48% in 2017. Glassy carbon rod is another important shape which mainly used to make glassy carbon electrode.
