The global Glucoamylase market was valued at 967.68 Million USD in 2021 and will grow with a CAGR of 1.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Glucoamylase is a glycoprotein with the molecular weight 60000-100000 containing mannose, glucose, galactose and alduronic acid. It can be used to the non-reduced end of amyllum and dextrin molecule to produce glucose. Glucoamylase is widely used biocatalysts in food industry. The major application of glucoamylase is the catalysis of alcohol, starch sugar, beer, white spirit and other fermentation industries. First, the glucoamylase industry concentration is not high. In the world wide, giant manufactures mainly distribute in China. China has a long history and unshakable status in this industry. With the future capacity growth, China glucoamylase production is in the rising trend. Second, all manufactures in the world are committed to the improvement of product. These two years, with the development the glucoamylase industry, some companies mainly pay attention to rising technology process, in order to form circular production and reduce costs. Third, we tend to believe this industry now is close to mature, and the consumption increasing degree will show a smooth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies. Fourth, although sales of glucoamylase brought opportunity, the study group recommends the new entrants just having money but without technical

advantage and downstream support do not to enter into the metronidazole field.
