Glaucoma is an ocular disease which affects the optic nerve of the iris and progression of the same results in vision loss and blindness. According to the World Health Organization (WHO), glaucoma is the most cause of blindness across the world. Currently, there are no existing treatments for glaucoma; however, some commercially available therapies focus on reducing the intraocular pressure, which is responsible for the development and progression of the disease. The treatment for glaucoma starts with topical eye drops, which is an alternative used to delay surgery. Growing prevalence of diabetes, eye disorders such as macular degeneration, aging population and growing government initiatives are observed to be the drivers of the global glaucoma surgical devices market. Increasing pool of geriatric population has been a prominent market driver, while corresponding to early disease diagnosis and treatment. As the global aging population and diabetic patient pool is perpetually increasing, it is anticipated that the future of glaucoma surgical devices market is ensured steady growth.
