The global Gluten-free Beer market was valued at 5212.42 Million USD in 2021 and will grow with a CAGR of 12.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Gluten-free beer is beer made from ingredients that do not contain gluten such as millet, rice, sorghum, buckwheat or corn (maize). People who have gluten intolerance (including celiac disease and dermatitis herpetiformis sufferers) have a reaction to certain proteins in the grains commonly used to make beer, barley and wheat. The hordein found in barley and the gliadin found in wheat are types of gluten that can trigger symptoms in sufferers of these diseases. Gluten-free beer is part of a gluten-free diet. Globally, the gluten free beer market is expected to be driven by factors such as raising health concerns among the consumers thereby increasing demand for gluten free products, new product launches and innovations by leading companies, and aggressive marketing by retailers about gluten free products. One of the primary challenges of the market is lack of awareness among the consumers about gluten free beers and the consumers are still apprehensive about the taste of gluten free beers, however with companies and retailers aggressively marketing the gluten free products, the impact of such challenge is expected to be diminishing over the forecast period.
