Glyoxal is an organic compound with the formula OCHCHO. It is a transparent liquid sometimes with light yellow color. Glyoxal is the smallest dialdehyde (two aldehyde groups). Glyoxal is an intermediate product that is mainly used as cross-linking agent in numerous industries, e.g. textiles, leather, paper, disinfectants, adhesives or constructions. Through its chemical reactivity, Glyoxal is a versatile starting material for various chemical syntheses. For industrial production, Glyoxal is produced as 40% water solution all over the world. Consequently, the statistics of our survey refers to the Glyoxal 40% instead of pure Glyoxal product. For industry structure analysis, the Glyoxal industry is concentrated. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry, but the top six producers account for more than 70% of the market. Regionally, China is the biggest production area of Glyoxal, also the leader in the whole industry. Europe and USA also produce large amount of Glyoxal per year. BASF is the leading player in EU, while Hubei Hongyuan leads China market.
