Abstracts

The global Glyphosate market was valued at 4505 Million USD in 2021 and will grow with a CAGR of 2.49% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Glyphosate is a non-selective herbicide, meaning an application will kill most plants. It does this by preventing the plants from making three amino acids (components of proteins and vitamins) that are required for growth. In the past few years, more and more companies entered into glyphosate industry, the current demand for glyphosate product is relatively low and the supply is excess. Ordinary glyphosate products on the market do not sell well; Price of glyphosate is lower than past years. The signal of market price change indicates the trend in the glyphosate industry growth
